

GOOD TO KNOW

PLASTIC FLOORS - VINYL

THE INDISPENSABLES

COMPOSITION

- Plastic coatings.
- Vinyl flooring by coating: the raw material is in liquid form and is applied to a support
- PVC floor by calendaring: the raw material is flattened between two rollers.
- Acoustic and thermal insulation capabilities that make it a good challenger for laminate or carpet

LAYING

- Floating or clipped installation: Clipped installation is the most common system. It allows to easily dismantle the ground without damaging the support. The installation is very simple, an undercoat is often recommended.
- Glued installation: The installation method remains the same, except that the floor will be fixed to your support thanks to the adhesive.
- Also exist: Lead planks, sticking planks, adhesive planks

MAINTENANCE & RECOMMANDATIONS

- Plastic floors are quick and easy to maintain
- Remove the dust with a vacuum cleaner. Use a damp cloth and warm, slightly soapy water.

CONTRAINdicATIONS

- Avoid washing with large amounts of water.
